

## QUALITATIVE ASSESSMENT ON IMPACT OF CLIMATE CHANGE

We will learn what have been the environmental and biodiversity changes in our area during the last few decades by asking some questions to members of the community that are 60 or older.

Photo by Markus Spiske on Unsplash

**Date:**

**Location:**

**Age of interviewee:**

- What animals could you see in this area when you were young? And how often did you use to see them?
- Do you see these animals nowadays? If so, how often?
- Have you noticed any changes in the plants of this area during the last 30-40 years?

- Have you noticed any changes in the climate of this area in the last 30-40 years? (e.g: Does it rain more or less? Does it snow more or less? Is it warmer or colder?)
- Have you noticed a change in people's health over the years?
- Have you noticed any changes to the seasons over the years?
- Do you know what could be the cause of these changes?
- Do you think there is anything you can do?

## Duration of the Activity

Around 20 min. This experiment can be done anytime by all the students (please consider we would like to have the results of this survey by the beginning of September).

## Results and Conclusions

Let's now put all the qualitative data together! Considering the information collected:

- Do you think that your community has been suffering the effects of climate change during the last decades?
- Do you think that the community realises that the changes in seasons, flora, fauna... are due to climate change?
- What do you think you can do to tackle the climate crisis in your area?

**DISCUSS THE RESULTS WITH YOUR CLASSMATES AND PLEASE REMEMBER TO ENTER YOUR RESULTS ON THE QUALITATIVE\_ASSESSMENT GOOGLE SHEET AT THE END.**
